Trim a Video or Audio File RELATED: To get started, open an mp4 file or another video with QuickTime.. Movavi is a video editor application for the Mac that has a free version as well as a more full-featured Pro alternative.. It can record via a variety of sources — using your Mac's webcam and audio to record a typical video is only one of them.. You can continue doing this to create multiple, smaller clips You can then drag the clips around to rearrange them, just as you can when merging multiple separate files together.. QuickTime is the default video player, so you should just be able to double-click your video file.
