Sharples Super Centrifuges Overview of the Sharples Super Centrifuge The Sharples Super Centrifuge is a machine for applying centrifugal force to a liquid.. There are, however, many applications where only the removal of suspended solids from a single liquid is required.. The widest product ranges in the field of centrifuges, dryers, agitated nutsche filters, filter dryers, mixers and system components.. This force separates the two liquids according to their specific gravities into concentric cylindrical layers, and the solids are deposited inside the rotating bowl against the rotor wall.

Super centrifuges for such applications are called Clarifiers and are often provided with only one set of discharge ports.. Academia edu is a platform for academics to share research papers How super centrifuge works This sectional view of a Super-Centrifuge shows the application of centrifugal force to a mixture of two immiscible liquids containing some suspended solids. The rotor, called a bowl, has an opening in the bottom to allow the liquid to enter, and openings in the top of the bowl to allow the fluid or fluids to discharge.. Continuous Solid-Liquid SeparationSolids are continuously separated from the liquid phase by the application of centrifugal force ranging up to 3000 times the force of gravity, efficiently and economically.. The mixture continuously enters the Super-Centrifuge through an inlet feed nozzle at the base of the machine, into the hollow cylindrical rotor.. The layer of accumulated solids that builds up on the inner diameter of the rotor wall is cleaned out batch-wise for which the super-centrifuge is shut down when it is filled up to the rotating bowl's limiting solids holding capacity and the rotating bowl is removed for cleaning.. 00 Current Offer-WESTFALIA Model CA 505 Decanter Centrifuge (Parts Machine) Asking Price \$57,500. SHARPLES Vertical Bowl T1P Decanter Centrifuge Asking Price \$13,750 00 Current Offer-40in x 60in BIRD Decanter Centrifuge, 304 Stainless Steel Asking Price \$42,000.. Mylar Liners are optionally supplied and can be placed on the inner diameter of the bowl for ease of removal of insoluble solids deposited on the inner diameter of the bowl.. The separated liquids are continuously displaced upwards by the incoming mixture and continuously discharged through their respective outlet ports at the top of the rotor.. A characteristic feature of the Pennwalt Super-D-Canter Centrifuge is the cylindro-conical bowl containing within a helical/quasi-axial screw conveyor of matching profile that rotates in the same direction but at a slightly slower speed with respect to the bowl..
